Spectra 12 A, 14 A and 112 A were obtained from A by the use of the sector disc with a proper ratio of open to TABLE II Showing the change in the selectiveness of the achromatic response of the eye to wave-length produced by varying the intensity of light. In this table are shown in per cent of the original value the photometric values of each of the colored lights when their energy values have been reduced respectively to 12, 14, and 112 of the values present in equal energy Spectrum A. The changes in the deviations of the relative photometric from the relative radiometric values produced by the changes of intensity may be noted by comparing the percentages in Column 2 with 50 per cent; in Column 3 with 25 per cent; and in Column 4 with 8.33 per cent. Chart I Showing the change in the relative selectiveness of the achromatic response of the eye to wave-length produced by varying the intensity of the light. In this chart is represented the photometric value in meter-candles of wave-lengths selected from eight different parts of equal energy spectra sustaining to each other the following ratios of intensity: A, Vz A, Vn, A, and 112 A. closed sector inserted between the collimator lens and the prism of the spectroscopy. The photometric-radiometric comparison was made with the...
