# Enabling Battlespace Persistent Surveillance: The Form, Function, and Future of Smart Dust

Filesize: 7.69 MB

Reviews

Absolutely essential read through ebook. Better then never, though i am quite late in start reading this one. Your life span will likely be change once you total reading this article pdf.
(Jody Veum)

ENABLING BATTLESPACE PERSISTENT SURVEILLANCE: THE FORM, FUNCTION, AND FUTURE OF SMART DUST

Biblioscholar Okt 2012, 2012. Taschenbuch. Book Condition: Neu. 246x189x3 mm. This item is printed on demand - Print on Demand Neuware - In 2025, the military's need for persistent surveillance applications will extend beyond current airborne platforms such as Global Hawk and Predator. The future of 2025 contains potential enemies with a material and information focus capable of conducting regular and irregular warfare on foreign lands as well as the continental United States. The US military must invest their energy and money today into researching enabling technologies such as nanotechnology, wireless networks, and micro-electromechanical systems (MEMS) to develop persistent surveillance applications such as Smart Dust for the future.The enabling aspects of these technologies, based in academia or business today, form the basis for the disruptive combat applications in the next 20 years. Nanotechnology, while fantastic in some aspects, reduces today's technology to the molecular level contributing to increased performance for the future. Facilitating globalization, wireless networks link people, computers, and sensors beyond the borders of nations without the need for costly hardware-intensive infrastructure. Finally, MEMS sense a wide array of information with the processing and communication capabilities to act as independent or networked sensors. Fused together into a network of nanosized particles distributed over the battlefield capable of measuring, collecting, and sending information, Smart Dust will transform persistent surveillance for the warfighter.With technological, social, and ethical challenges preventing growth, the US military should lead research, development, and education on these enabling technologies to realize the full benefits of Smart Dust by 2025. Through policy decisions, the United States, as the world's superpower, must continue to lead the development of innovative technologies to preserve the balance of power for the future. 46 pp. Englisch.
